Databse

SQLITE3

I have created this database on the subscriber machine

Database installed manually and tables also created manually.

sudo apt install sqlite3

Created the database
sqlite3 mqtt.db

Add table
CREATE TABLE data (
id INTEGER NOT NULL PRIMARY KEY AUTOINCREMENT,
ipv4 TEXT,
mac TEXT,
vendor TEXT);

this will create the index if it does not exist or throw an exception if an error occurs (such as the index already exists)
CREATE UNIQUE INDEX datatimestamp ON data(ipv4);

querry data table
SELECT ipv4, mac, vendor
FROM data;

fake values
INSERT INTO data (ipv4, mac, vendor)
VALUES ('0.0.0.0', 'AA:AA:AA:AA:AA:AA', 'TestMachine');
